**ADA Compliance**  
(when properly installed)  
4.4.1 Max. Protruding Objects  
4.2.5 Forward Reach  
4.2.6 Parallel Approach  
4.2.7.4 Operation

**MATERIALS:**

Type 304 brushed stainless steel. May be recessed and finished with optional trim kit (KB144-99).

**OPERATION:**

The shelves of the Diaper Dispenser are easily reset for loading by running the index finger up the right side of the shelves. The top shelf has an automatic empty device that will cause the coin mechanism to reject all coins when the vender is empty. The vender will be factory set to vend at one dollar unless a setting in a different 25-cent increment is requested.

**INSTALLATION:**

To insure proper installation and compliance to building codes, it is recommended that a qualified person or carpenter perform the installation of the unit. The Koala Bear Kare® Diaper Dispenser meets ADA regulations when properly installed. Refer to Federal Register, Volume 56, No. 144 28 CFR Part 36.

The vender can be mounted on a vertical surface without removing any part of the unit. Any standard fastener not larger than 3/8" diameter such as wood screws, expansion bolts, machine or carriage bolts can be used depending on the type of wall. The wall section selected for installation should be sturdy.

The top two fasteners should be loosely installed in the wall with the heads of the fasteners projecting approximately 1/4". Raise the top shelf of the magazine into its vend position to expose one of the two top mounting holes in the back of the cabinet. The keyhole shape of the mounting holes will permit you to hang the cabinet on the two fasteners. While in this unsecured position, mark the bottom two mounting holes on the wall and remove the cabinet. Install the bottom two fasteners and secure the cabinet to the wall using washers under the heads of all fasteners.

**SPECIFICATION:**
